#73962 Front A-arms for the Associated SC10 4x4
UPC #672415739624

RPM engineers meticulously scrutinized a set of front A-arms for the Associated SC10 4x4 to see where we could improve on the stock design. The result... An A-arm design that can handle the roughest and toughest abuse and still come back for more!

Since strength and durability were primary design considerations, we focused on common breakage areas for strength upgrades. Hinge pin and cross-holes such as shock mounts and anti-sway bar holes have been beefed up for some much-needed muscle. The structure of the A-arms is also dramatically different than the stock design, which not only helps with the strength and sturdiness of the overall design, it also helps contribute to a stronger, less flexible design than the stock A-arms. All this extra strength and at a weight that is virtually identical to stock Associated A-arms!

RPM A-arms for the SC10 4x4 are molded in black from our trademark blend of extremely durable materials and are backed by our limited lifetime warranty. With a set of *RPM* A-arms on your ride, we'll make sure you make it to the finish line!
