

## *New Product Alert!*

**#82312      Rear Bumper Mount for the HPI Baja 5SC**  
**UPC #672415823125**

The stock rear bumper mount on the HPI Baja 5SC does not allow the use of current, highly popular rear-mounted exhaust pipes. That is no longer an issue! **RPM** Rear Bumper Mounts use our very popular 5B / 5T rear skid plate, coupled with an all new bumper mounting system that perfectly mates with stock components while keeping the rear bumper in the stock location. However, with an **RPM** bumper mounting system installed, you'll have a large enough gap behind the rear bulkhead to run those rear-mounted pipes you've been wanting.

The **RPM** Rear Bumper Mount for the HPI Baja 5SC is a five-piece design that eliminates the two stock components that would normally interfere with a rear-mounted exhaust pipe. Our bumper mount is designed for strength, durability and exhaust pipe protection and as an added bonus, weighs in **more than 5 grams lighter** than the stock components they replace!

**RPM** Rear Bumper Mounts are molded in black in our trademark blend of extremely tough nylons and are backed by our world-renowned limited lifetime breakage warranty.
