- #80652 **Black Front A-arms**
UPC #672415806524
- #80655 **Blue Front A-arms**
UPC #672415806555
- #80659 **Red Front A-arms**
UPC #672415806593

Traxxas has released a flood of new vehicles based on the 1/16th Slash 4x4 chassis (see **tech notes** below) and what better way to improve on these exciting models than with a set of **RPM** front A-arms. Our primary concern in building a new **RPM** A-arm design was durability. What we came up with is sure to please even the roughest, craziest bashers out there.

Additionally, our A-arms eliminate *nearly all* of the A-arm slop, which allows camber, caster and toe angle settings to be more solidly fixed in position. The result: A smoother, more consistent steering and suspension system with a significantly reduced tendency for the truck to randomly wander while driving.

Unique to **RPM** suspension arms is our angled leading and trailing edges. We incorporate a 30-degree bevel in these areas, which reduces the chance of breaking suspension parts since the A-arm will naturally try to transition over objects instead of bluntly plowing into them.

RPM front A-arms for the Traxxas 1/16th scale Slash 4x4 are sold in sets of four – including both upper and both lower a-arms. **RPM** 1/16th scale Slash 4x4 A-arms, like all **RPM** molded products, are backed by our industry-leading breakage warranty for worry-free operation.

Tech Notes: These **RPM** A-arms fit all of the following Traxxas 1/16th scale models: Slash 4x4, F-150 Raptor SVT, Ford Fiesta, Ken Block Gymkhana, Ford Mustang Boss 302, Kyle Busch Race Replica & Rally VXL.

Coming Soon

We are working away on completing a set of rear A-arms for the 1/16th scale Traxxas Slash 4x4 and expect them to be completed in early December. More details will come as we finalize our molds!
