UPC #672415806753
- #80679 **Red Rear A-arms**
UPC #672415806791

Following the successful launch of **RPM** front A-arms a month prior, **RPM** rear A-arms for the 1/16th Slash 4x4 chassis (see **tech notes** below) are here. **RPM** rear A-arms follow all of the same indestructible characteristics our customers have come to expect from **RPM** parts. Our rear A-arms eliminate *nearly all* of the A-arm slop found in stock components, which allows camber, caster and toe angle settings to be more firmly fixed in position. The result: A smoother, more consistent suspension system with a significantly reduced tendency for the vehicle to randomly wander while driving.

Unique to **RPM** suspension arms is our angled leading and trailing edges. We incorporate a 30-degree bevel in these areas, which reduces the chance of breaking suspension parts since the A-arm will naturally try to transition over objects instead of bluntly plowing into them.

RPM rear A-arms for the Traxxas 1/16th scale Slash 4x4 are sold in sets of four – including both upper and both lower a-arms. **RPM** 1/16th scale Slash 4x4 A-arms, like all **RPM** molded products, are backed by our industry-leading warranty against breakage for worry-free operation.

Tech Notes: These **RPM** A-arms fit all of the following Traxxas 1/16th scale models: Slash 4x4, F-150 Raptor SVT, Ford Fiesta, Ken Block Gymkhana, Ford Mustang Boss 302, Kyle Busch Race Replica & Rally VXL.
